Professional Summary

B.Tech Computer Science student skilled in full-stack development and AI/ML. Experienced in building end-to-end full-stack applications and deploying them. 3 hands-on internships. Proficient in Javascript, Python, Java, C++, and C. Eager to apply my skills and contribute to impactful, intelligent solutions.

Technical Skills

- **Programming Languages** — Javascript, Python, Java, C++, C
- **Frontend** — Javascript, React | CSS, TailwindCSS, Bootstrap | HTML
- **Backend** — RESTful APIs, MVC Architecture | Node.js, Express | MongoDB, MySQL
- **Other Tools:** DigitalOcean, Nginx, Git, GitHub, Android Studio

Work Experience

Data Science Intern — Amdox Technologies

Dec 2025 — Jan 2026

- **Tools Used:** Python, scikit-learn
- Built an AI-based emotion classification system from employee feedback using scikit-learn. Designed a rule-based task recommender to align work assignments with emotional states, improving task-person fit.

Fullstack Developer Intern — Cognifyz Technologies

Jun 2025 — Jul 2025

- **Tools Used:** Node.js, Express, MongoDB, React, TailwindCSS
- Built a REST API, integrated MongoDB for data storage, and implemented user authentication using JWT. Integrated third-party APIs and optimized server performance with middleware, caching, and background tasks.

Fullstack Developer Intern — MaMo Technolabs LLP

Dec 2024 — Jan 2025

- **Tools Used:** PHP, Javascript, CSS, HTML
- Contributed to a furniture e-commerce platform. Implemented user authentication, session handling, and responsive UI components.

Projects

Orbis - Voice Assistant for Desktops

- **Tools Used:** Python, speechrecognition, gTTS, googletrans, nltk, scikit-learn, Tkinter
- A desktop-focused voice assistant which allows users to perform everyday tasks such opening applications, searching the web, and managing system functions through natural voice commands.

PawsProtect

- **Tools Used:** Node.js, Express.js, React.js, Firebase
- An animal welfare platform to report animals in distress, book veterinary appointments, adopt pets, buy pet food and garments, raise awareness, and donate or volunteer.

Real-Time Face Recongion System

- **Tools Used:** Python, OpenCV, Tkinter
- Features include user registration, face data collection, model training, and automated CSV- based attendance logging. The system uses Haar Cascade for face detection and the LBPH algorithm for recognition.

Education

B.Tech in Computer Science Engineering — GSFC University, Vadodara

2022 — Present
